```

1. Какие из полей required, а какие нет
 - а. Все поля являются обязательными
2. При этом может ли значение поля быть равно null? Для каких полей может, для каких нет?
 - а. **Указаны поля, что могут принимать null**
3. Есть ли известные минимумы/максимумы для чисел, максимальные длины для строк и тд? Для схемы валидации они требуются.
 - а. Для полей явно имеющих ограничения не обусловленные типом данных добавлено
4. В схемах валидации должны быть указаны крайние значения для всех полей. Какие значения по умолчанию проставить для полей, у которых в модели ограничений нет?
 - а. **Ограничений по длине полей нет, все попадают под архисключение**
5. Не у всех полей есть описание. Например, его нет у contextSize, большинства полей внутри nodeInstances, retries key, value в variables. (В некоторых описаниях есть опечатки: «проецссов», «переменных»)
 - а. Добавила дополнительные описания, смотрите обновленную схему

6. Описание всё ещё есть, но не везде. Обращаю внимание снова на поля внутри `nodeInstances`, и `variables`. И добавляются поля в `extIds`
 - а. Добавила описания для всех полей
7. У `extId` указан тип `object`, тогда для него должна быть прописана схема. Раньше это поле было `integer`, может быть и сейчас должно быть так?
 - а. `Object`, схема добавлена
8. Вижу в схеме не `object`, а `array`. Это будет массив объектов? Или просто объект? Просьба уточнить. И привести пример.
 - а. Это будет один объект с парами ключ значение, пример привести не могу так как нет инструмента чтобы заполнить это поле
9. Поле `variables` раньше имело тип `object`. А сейчас указан `array`, содержащий `object`'ы как `items`. Это сейчас тип указан ошибочно или нарушится обратная совместимость? В текущих примерах сообщений не видела массивов в это блоке. Если блок изменился — пришлите, пожалуйста, пример сообщений с измененной структурой. А если не менялся — то просьба проверить и уточнить модель
 - а. Поле типа `object`, содержащее массив пар ключ значение, смотрите обновленную схему
10. Опять же, вижу в схеме не `object`, а `array`. Причем внутри `array` лежат `properties`, что некорректно. Это будет массив объектов? Вложенность тогда должна быть `array { items { object { properties } } }`. Или просто объект?
 - а. Это один объект
11. В любом случае, любой тип `object` требует конкретной схемы. Просто указать «value»: { «type»: «object» } и уже потом посылать любые разнообразные объекты — некорректно. Схема валидации требует четко заданные структуры всего содержимого.
 - а. Схемы для данного поля нет, действительно в значении переменной может лежать произвольный объект:

[illegible]

12. Обновлений в блоке variables между прошлой и новой схемой не вижу. Вижу небольшое изменение в описании только, при этом опечатка «переменным» с недостающей буквой «е» сохранилась.
 - а. Исправлено
13. Также, просьба ответить на вопросы по поводу нарушения обратной совместимости. И привести пример события с заполненным блоком variables.
 - а. Нарушений обратной совместимости с 4 версией нет, приведено выше

Новые вопросы и комментарии:

1. Поле **resourceName** является deprecated, при этом при валидации мы принимаем его? Какая `maxLength`?
 - а. Да оно принимается, указано для дальнейшего удаления в следующих релизах.
Ограничений на длину нет
2. Поля **startDate**, **endDate** указаны с типом `string` и `maxLength=14`. Подскажите пример даты. Потому что раньше даты отправлялись в формате date-time "yyyy-MM-dd'T'HH:mm:ss.SSSXXX», а здесь больше 14 символов. Если имеется в виду timestamp - снова вопрос обратной совместимости встаёт, а также не должен ли тогда тип быть `integer`?
 - а. Ограничения на длину я убрала так как их нет, тип данных `string`
3. Поле **Version** имеет тип `integer`, значит должно иметь не `maxLength`, а `minimum` и `maximum` в числовом выражении
 - а. Ограничений нет
4. Поле **bamProjectId** стало `integer` — почему?? Опять же обр. совместимость. При этом внутри `kogitoEvent` это поле остается типа `string`.
 - а. Исправила на `string`
5. В поле **policies** опечатка - `itmes` вместо `items`.
 - а. Исправлено

Несколько примеров схем событий
